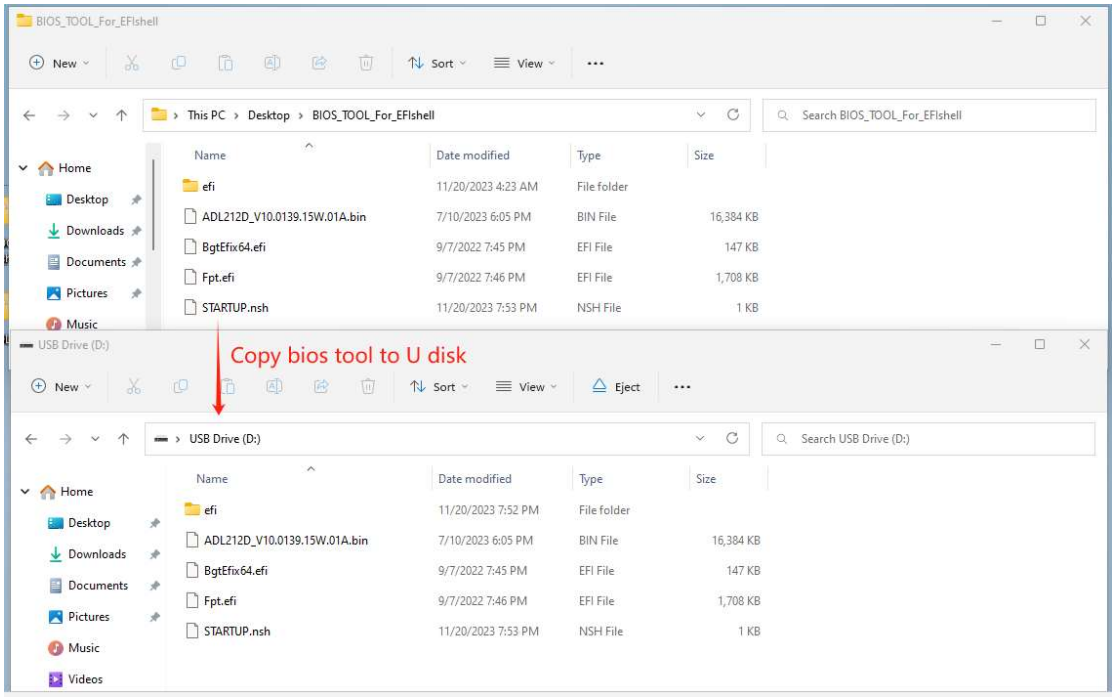
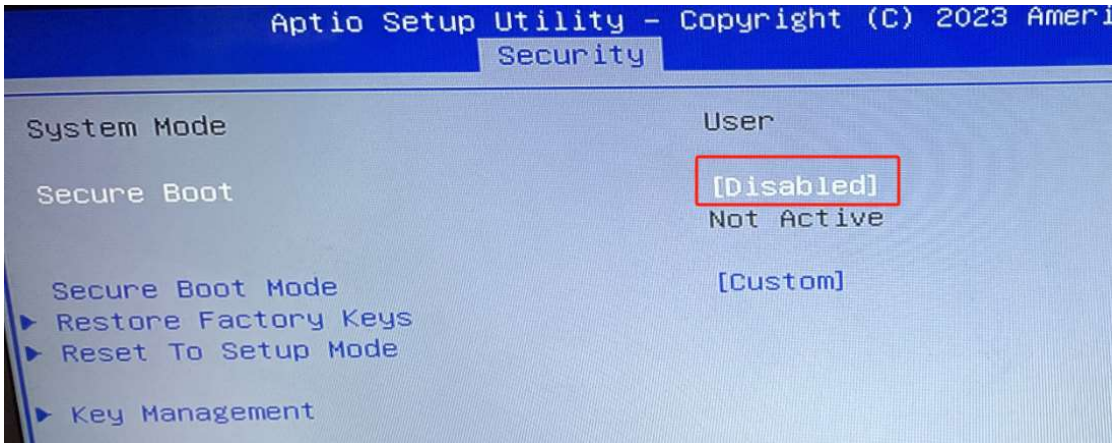
Update BIOS

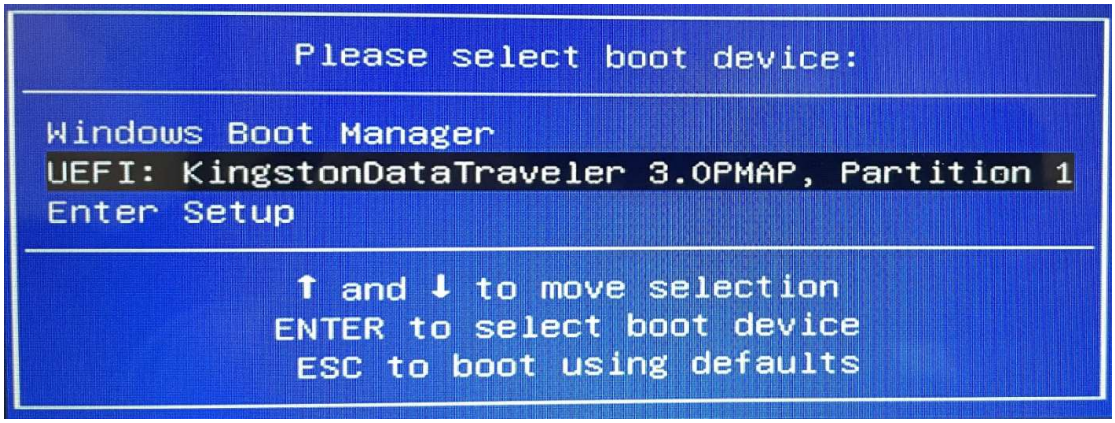
1. Copy the BIOS tool to the root directory of the USB disk（disk format:Fat32）



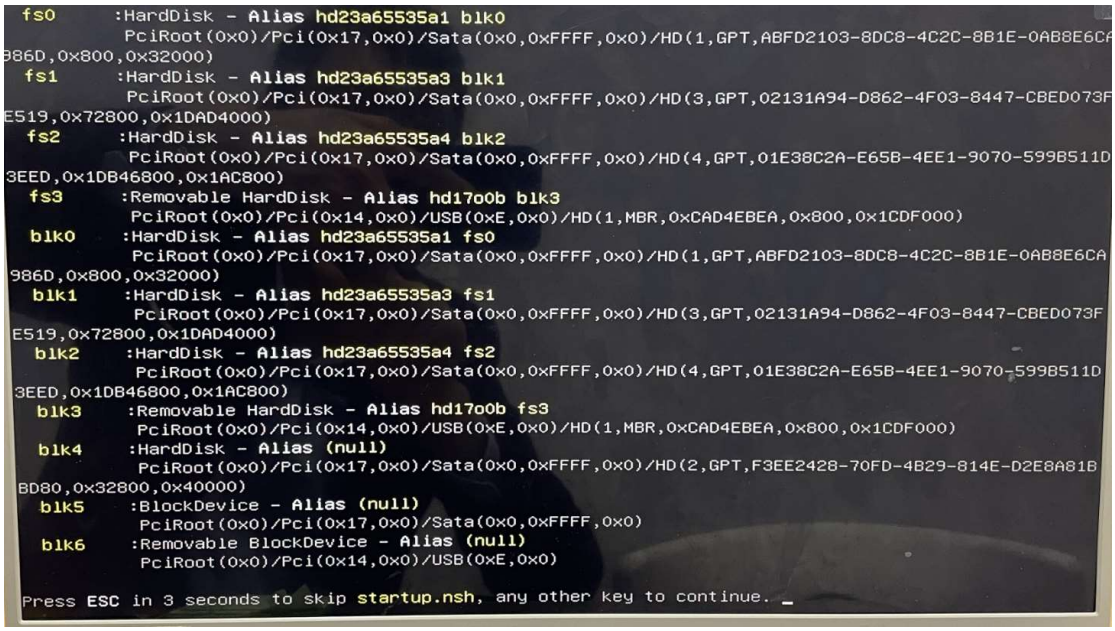
2. Bios setup close secure boot，Security->Secure boot-> Disabled，F4 Save Changes and Exit（Do not insert USB port into USB drive）



2. During the startup process, press F7 to pop up the startup menu, select Start from USB disk, and go to EFIshell



Press the Enter key to automatically update the BIOS



Update completion, unplug and insert the USB disk, reboot takes approximately 2 minutes to wait.

3. Go to BIOS setup again, press F3 and F4 to restore BIOS to default values, and save to exit.
